EXPERIENCE

BWI Group — Dayton, Ohio

Lead Systems Engineer (Mar. 2024 – Present)

- Lead technical communication with 5+ customer contacts across two suspension product lines – Four Corner Air Leveling and MagneRide Dampers
- Selected alongside Chief Engineer to represent BWI North America in Paris technical review ahead of critical software delivery deadline
- Primary point of contact for management on project status, planning, and solutions
- Serve as a technical resource for engineering across departments on system architecture, troubleshooting, and project execution
- Perform full control algorithm engineer responsibilities in addition to lead duties

Control Algorithm Engineer (Jun. 2023 – Mar. 2024)

- Designed suspension control Simulink models using MBSE methodology
- Developed GUI and algorithm to automate suspension calibration process, reducing 2+ week manual effort to ~1hour – adopted across North American programs
- Validated suspension software performance through vehicle and bench testing via XCP/CANape
- Reviewed and tuned hundreds of suspension calibrations to ensure correct configuration and compliance with customer performance requirements

System Test Engineer (Mar. 2022 – Jun. 2023)

- Developed and maintained Vector regression test suite covering functional, safety, service and manufacturing cases for 7 different programs on HIL System
- Validated internal and customer releases through HIL testing to ensure system compliance
- Established version control process for test case library, improving traceability between programs and software releases
- Primary customer contact for system safety requirements

Northrop Grumman — Redondo Beach, California

Principal Systems Engineer (Nov. 2020 – Nov. 2021)

- Optimized MATLAB scripts to reduce run-times
- Implemented system engineering V-Model for a large set of requirements
- Developed BER curve simulations for communication systems
- Computed RF requirement capabilities, margins, and compliance

Dynetics – A Leidos Company — Dayton, Ohio

Electrical Engineer II (Dec. 2017 – Aug. 2020)

- Project Manager for two engineering contracts
- Met with customers to discuss project status and milestones
- Added new capabilities to radar Simulink models
- Developed GUIs to illustrate radar functionality

SKILLS

MATLAB & Simulink
Modeling & Simulation
GUI Development
Signal Processing
Telecommunications
Project Planning
Version Control
V-Model
CANoe & CANape
Python Scripting
Networking
ECUs
Microcontrollers
C Programming
Git

EDUCATION

M.S. Electrical Engineering
Wright State University
Dayton, OH
2017-2018

B.S. Electrical Engineering
Wright State University
Dayton, OH
2013-2017

PROJECTS

Personal Website – Jekyll
MIL GUI – MATLAB
Calibration GUI – MATLAB
Linux/RDP – Remmina
Finance Website – Claude AI
